

Versatile and Rugged Lead-based Industrial Charger Series

- California Energy Compliant
- Rugged and reliable design
- · Capable of direct charge or BMS
- Power phase-back with temperature
- Factory Settable voltage/current
- Transient protected input/output
- Active I/O reverse polarity protection
- Informative LED display
- Optional wireless/digital interface
- Relay and discrete I/O signals
- Over temp protection with auto reset
- Overcurrent / overvoltage protected
- Four year warranty

Description

The F-Series is an environmentally robust and sophisticated battery chargers with models supporting Leadbased batteries. With a wide operating temperature range (-25°C to 65°C), a rugged mechanical design, and AC or DC input power options, this product is well suited for high end industrial applications. The charger complies with the California Energy Commission guidelines and with UL/CSA specifications.

The enclosure is sealed and impervious to pollutants, The unique mechanical design provides extremely high power density and environmental reliability.

The F-Series optional external communications can be programmed with user specific firmware. The product may be ordered with an optional user defined set of discrete I/O signals, a wireless option, an RS-232 or

RS-485, CAN or other interfaces.

An informative LED display indicates state of charge, input power present, battery voltage and current, fault conditions and proper battery connection are standard. The F-Series charger precisely controls the charging algorithm to insure a complete recharge while prolonging battery life. The charger can be programmed for direct pack charging or with a BMS (battery management system) equipped pack.

The F-series can be connected indefinitely making it ideal for remote and standby applications. It is mountable in any orientation and can be ordered with input and output power connectors per customer specification. Customized charging algorithms, power sequencing and control/monitoring options are available upon request.

AC input model

PARAMETER DESCRIPTION / CONDITIONS AC input voltage range 3 input ranges covering 85 VAC 240 VAC Input AC amps (max) Measured at 85 VAC / 200 watts output: 3.0 Arms WITH NO PFC AC input configuration AC input: line, neutral , chassis ground Connector Nema 5-15P

DC input model

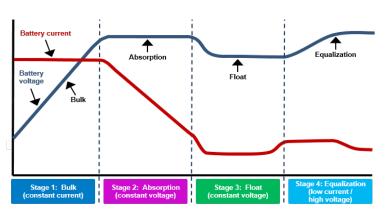

PARAMETER	DESCRIPTION / CONDITIONS
DC input voltage range	8 input ranges covering 11 VDC to 500 VDC
Input DC amps (max)	Measured at 48 VDC / 90 watts output: 2.6 A
DC input configuration	DC input: DC Power, DC Return, Chassis ground
Connector	Ring terminals or user defined

F-Series Model Specific Specifications

Four Stage Lead-based battery charging curve

Charging algorithm: Supplies constant current $I_{mx.}$ to battery until absorption voltage is reached (V_{FSTERM}). Transition to absorption mode follows and regulates battery voltage at V_{FSTERM} until current decreases to $I_{ABTERM.}$ Float mode follows and regulates battery voltage at $V_{FLOAT.}$ At the user's discretion, an equalization mode can be initiated. The equalization voltage V_{EQ} is approximately 2.5V/cell and battery current is limited. For more information, please refer to www.chargetek.com/images/pdfs/equal.pdf

Standard LED indicators

F-Series Ordering Guide, p/n GbF-xyz-r

P/N Field	Definition	Options	Description See description of field z in the part number for input voltage range options.						
b	Input Power	A - AC input E - DC input							
х	Number of Series Cells Defines the output voltage.	For Lead-based chargers the options are: 3S, 6S, 9S, 12S, 14S, 18S, 24S, 30S and 36S	This option determines the Nominal Charging Voltage for Lead- based batteries. For Lead-based chargers the nominal output voltage is the number of cells multiplied by the nominal cell voltage of 2.0V. For example, option 12S would specify a 24V charger, (12 times 2.0V/cell = 24V)						
У	Maximum Charging Current	Maximum Charging Current in amps.				ng Current vs. Number eries Cells			
		For standard model the maximum			Series Cells		Max. Cui	rrent	
		charging current is determined			6V(3S)		10 Am	ps	
		by the number of Series Cells, see tables to the right. If a <i>lower</i> maxi-		Ì	12V(6S)		5 Amı	os	
		mum output current is desired			18V(9S)		4 Amı	os	
		then it is specified in this field as			24V(12S)		3 Am	os	
		For example a standard AC input Lead-based 6S model is ordered as GAF-S65-1. If a charger with		[28V(14S)		2.5 Am	nps	
					36V(18S)		1.8 Am	nps	
				Ī	48V(24S)		1.4 Am	nps	
		a maximum output current of 3			60V(30S)	1.0 Amps			
		amps is needed the order number would be GAF-S63-1.		[72V(36S)		0.9 Am	nps	
Z	Input voltage range	For AC input chargers, three op-			Input Voltag	e R	ange Optio	ons
